

ABSTRACT

An eaves trough support bracket which includes (a) a main beam having longitudinally spaced distal and proximal ends, laterally spaced first and second edges, and transversely spaced first and second surfaces, (b) a connection element extending in a first transverse direction from the distal end of the main beam, (c) a hook extending in the first transverse direction and second longitudinal direction from the proximal end of the main beam, and defining a concavity open in a second transverse direction, (d) a first leg extending in a second transverse direction from the first edge of the main beam with a proximal longitudinal end substantially transversely aligned with the proximal end of the main beam, and (e) a second leg extending in the second transverse direction from the second edge of the main beam with a proximal longitudinal end substantially transversely aligned with the proximal end of the main beam.
